

How To:

Install Drippers

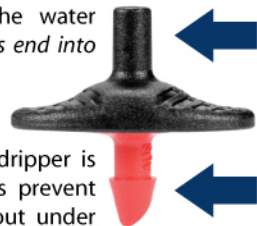

Drippers can be installed in either 1/2" Poly or 1/4" Vinyl Tubing.

Be sure to install the barbed end of a Dripper into the tubing.

Anatomy of a Dripper:

The smooth stem is the water outlet. *Do NOT install this end into Vinyl or Poly Tubing.*

The barbed side of the dripper is the inlet. The barb helps prevent Drippers from blowing out under high water pressure.
